## Color Meter for Textile Industry

New fabric designs depend on fashion trends and consumer attitudes. Color is a key factor in the textile industry. Depending on the manufacturing location and the kind of fabric, it can be tough to replicate a special colour.

PCE Instruments offers color meters that strengthen every part of the international textile production and sales chain. Perfect color measurement results will be achieved even when the base material, fabric rolls, are varying very much (from roll to roll). Also when different manufacturers produce textiles in plants all over the world. Producers of unwoven fabrics as well as trading companies trust in the high quality color measurement instruments of PCE.
