PCE INSTRUMENTS

TEST INSTRUMENTS FROM GERMANY

Maintenance and Service

The company PCE Instruments based in Meschede-Freienohl in the German Sauerland region was founded in 1999 by three engineers. With more than 120 employees and several branches around the world, the company focuses on the development, production and distribution of high-performance and innovative products from the fields of measuring instruments, control systems, weighing equipment and laboratory technology.

PCE Instruments' wide range of products and services offers high precision and flexibility in any application as well as outstanding quality and functionality. The different fields can be seen in the overview.

MEASURING INSTRUMENTS

The field of measuring instruments covers a multitude of innovative portable products as well as products for fixed installation that measure electrical, mechanical, biological and chemical parameters.

CONTROL SYSTEMS

The range of control systems covers the complete demand for sensors, displays, controllers and paperless recorders.

WEIGHING EQUIPMENT

The field of weighing equipment comprises a wide standard range of high-quality scales and balances that can be calibrated and/or verified for trade.

LABORATORY TECHNOLOGY

High-end analytical and laboratory devices have been developed for professional applications and in particular for use in laboratories.

DEVELOPMENT

In order to develop modified test equipment in line with customers' specifications, proficient engineers and technicians cooperate closely with the customer.

PRODUCTION

PCE Instruments manufactures industrial test instruments that help improving process analysis and optimisation.

CALIBRATION

Our DIN EN ISO 9001:2015 certified calibration laboratory verifies the measuring accuracy of our products. They calibrate pressure, hardness, force, material thickness, sound volume, conductivity, redox, vibration acceleration and more.

PCE-VT 3700 / PCE-VT 3700S

Handy entry-level device for vibration monitoring of machines and systems

The vibration meter is ideal for maintenance workers to quickly check vibrating parts, machines and systems. This vibration meter shows the vibration acceleration, vibration velocity and vibration displacement directly on the display. You can use the device to quickly and reliably detect machine imbalances which can lead to, for example, bearing damage. The vibration meter is equipped with a mode that allows a measurement according to ISO 10816-3 to be carried out. The vibration meter analyzes the measured values and automatically shows a good / bad evaluation on the display. The vibration meter is supplied with a sensor on a spiral cable, magnet adapter, service bag and batteries. The ISO factory certificate completes the scope of delivery.

ISO cal option

» automatic ISO 10816-3 evaluation
» easy to handle
» for mobile vibration measurement
» coloured graphic display
» peak-hold function

Vibration analyzer with external sensor / data logger function

The vibration analyzer is the ideal companion for checking vibrating parts, machines and plant. With the external vibration sensor of the vibration meter, the vibration displacement up to 3.9 mm, the vibration velocity up to 399.9 mm/s and the vibration acceleration up to 399.9 m/s² can be determined. RMS, peak, peak-to-peak and crest factor are available as measurement parameters on the vibration meter. Another function of the vibration measuring device is the automatic evaluation according to ISO 10816-3. Accordingly, the vibration meter can determine the current vibration state of a machine via a good/bad evaluation. This means that the vibration meter is used, for example, for repair and maintenance work on machines.

Vibration analyzer with internal memory / route measurement

The vibration analyzer is an ideal measuring device for fast and precise checking of vibrating parts, machines and systems. This vibration meter uses the external vibration sensor to determine the vibration displacement (measuring range 0.000 … 3.9 mm), the vibration velocity (measuring range 0.00 … 399.9 mm/s) and the vibration acceleration (measuring range 0.0 … 399.9 m/s²). Various measurement parameters are available for the vibration meter, such as RMS, peak, peak-peak and crest factor. The vibration meter is equipped with a mode that allows a measurement to be automatically evaluated according to the limit values of ISO 10816-3.

PCE-VT 1100 SERIES

Measurement of acceleration, vibration velocity and displacement

The vibration analyzer is used as a hand-held measuring device for the individual assessment of vibrations on machines and systems. With the help of this vibration analyzer, the actual state can easily be determined on site. Thus, corresponding changes can be made directly on site after the measurement. Thereafter, the new condition can be assessed. Thus, the vibration analyzer serves as a measuring device for a relative measurement on different machines.The vibration analyzer serves essentially as precautionary or preventive maintenance of production machines. Very often, the vibration analyzer is used to assess the state of smaller electric motors.

ISO cal option

» measures speed, distance, acceleration
» keeps the value after every measurement
» easy to handle, powered by batteries
» wide frequency range
» automatic shut-down after 20 seconds of inactivity to protect battery life

PCE-VM 20

Vibration meter for vibration measurement on machines

Rotating components in machines generally cause machine vibrations which can go over to the entire machine via mechanically coupled components. This creates a mixture of vibration with different frequencies. This machine vibration can have different effects some of which may be desired (e. g., in conveyors or vibrating sieves) – however, in most cases they are undesirable and cause poor manufacturing qualities and increased wear of the machine. Increased wear and tear due to machine vibrations leads to reduced running times, higher failure rates and higher maintenance expenditure, i. e. to avoidable costs as a whole.

ISO cal option

» real-time FFT analysis

» robust housing

» many vibration parameters

» integrated rechargeable LiPo battery

PCE-VM 22

Vibration analyzer with 4 GB data memory / Measuring range 0 … 200 mm/s²

The vibration analyzer has a measuring range of 0 … 200 m/s² for acceleration. In addition to acceleration, the vibration meter can also measure speed, displacement, frequency and an ISO 18016-3 measurement. During the vibration measurement, an FFT view is simultaneously displayed on the vibration meter. By pressing a button, it is possible to switch from the FFT analysis to the actual wave view of the vibration. This makes it possible to analyse and evaluate a vibration even better with the vibration meter. The magnetic holder of the vibration sensor of the vibration meter is designed in such a way that it can be attached to curvatures with a minimum radius of 20 mm / 0.78".

ISO cal option

» measuring range 0 … 200 m/s²

» infrared temperature measurement

» 4 GB data storage

» 8 hours of battery life

PCE-WVS 50

Diagnostics of rolling bearings by crest factor / 3 parameters of vibration

A distinctive feature of the accelerometer is the ability to work in the following modes: Classic vibrometer - means using the device as an indicator of the overall vibration level, measuring peak values, displacement or diagnosing rolling bearings using the crest factor. As a result, the accelerometer displays the current and the average value. The duration of the averaging of the vibration values can be individually adjusted on request.

This mode is useful for daily monitoring of equipment: pumps, gearboxes, electric drives and turbochargers, including individual units of rotating equipment and the entire unit as a whole, providing a general understanding of the vibrational state of industrial equipment at the enterprise.

ISO cal option

» vibration velocity, vibration acceleration and vibration displacemen

» with magnetic holder

PCE-VDL 24I

3-axis acceleration up to 1600 Hz

The acceleration sensor of this 3-axis data logger has a sampling rate of 1600 Hz. The sensor mesures the current acceleration (3 axes), for instance in case of a shock or vibration. The measurements are made in pre-set (selectable) time intervals. The data measured with the internal 3-axis acceleration sensor are saved to a 32 GB memory card. This makes the data logger perfectly suitable to determine the acceleration for the purposes of fault diagnostics / stress test of components, machine monitoring, shock measurements and preventive maintenance in general.

ISO cal option

» 3-axis acceleration up to 1600 Hz

» 32 GB SD memory card

» compact design: 86.8 x 44.1 x 22.2 mm

» country of origin Germany

PCE-S 42

Machine stethoscope to listen to bearings and motors / 32 sound levels

The automotive-testing mechanics stethoscope PCE-S 42 is designed for listening to individual machine parts, which enables you to carry out maintenance and repair work using the machine stethoscope. The use of a machine stethoscope thus makes it easier to listen to sound phenomena in bearings and motors. This makes it possible to amplify noises that imply that the machine is slightly damaged, which can cause severe impairments and damage to the machine if not observed. The machine stethoscope comes with headphones the shape of which is adapted to the human head and thus are perfectly suitable to be used in noisy environments. The big, padded earpieces have a noise-suppressing effect and at the same time offer wearing comfort.

ISO cal option

» two different measuring tips

» non-stationary measuring device

» 32 volume levels

» headphones adapted to the human head

» for preventive maintenance and servicing

» noise-suppressing headphones

TECHNICAL SPECIFICATIONS

Frequency range	30 Hz ... 15 KHz
Operating temperature	-10 ... +40 °C
Output volume	digitally adjustable (32 levels)
Headphones	32 Ω
Power supply	4 x AAA battery
Battery life	30 h
Dimensions	220 x 35 x 35 mm
Length sensors	70 / 280 mm

APPLICATION

PCE-2900

For metallic materials / Measuring range 170 ... 960 HLD

The hardness tester PCE-2900 has been developed for hardness measurements on metallic materials. The hardness tester measures the material hardness in Vickers, Brinell, Rockwell, Leeb and Shore. The hardness tester PCE-2900 measures the hardness according to the Leeb rebound principle. An impactor bounces on the workpiece via a firing pin and the metal hardness is measured via the rebound.

The PCE-2900 hardness meter is equipped with a backlit colour display. Likewise, the buttons on the PCE-2900 are illuminated. Thus, the display can be read well even in low light conditions. The impact device is connected to the hardness tester via a cable.

ISO cal option

» USB and WiFi for data transmission

» large, bright touch-screen LCD display

» large measuring range

» measurement possible in every position

» hardness scales (HRC, HRB, HV, HB, HS)

» for all metallic materials

PCE-BTM 2000A

**To measure the tension of V-belts or drive belts**

The PCE-BTM 2000 is a measuring instrument to determine the tension of V-belts or drive belts. Belt tension can only be measured when the belt is not in operation. A small impulse with the help of a beater is enough to make the belt vibrate. With a measuring probe and a sensor beam, the generated vibration frequency is determined. The belt tension is calculated on the basis of the measuring data of the natural frequency as well as the belt mass and the length of the free belt span. It is not necessary to enter the belt mass and the belt length. The maximum service life of V-belts or drive belts can only be achieved with ideal tension.

ISO cal option

» measures vibration frequency of the belt

» intuitive operation

» calculation of belt tension (trum force)

» displays belt tension in N

» 6 menu languages

» memory for 750 readings

» sensor with gooseneck

» belt length and belt mass can be entered

PCE-LES 103

LED tachometer with a range of 60 ... 300.000 flashes

The LED stroboscope PCE-LES 103 combines LED technology with intelligent and compact electronics for precise control of the flash frequency. The mobile handheld stroboscope is particularly suitable for non-contact measurement and visualisation of movements on machines and systems. The frequency of the PCE-LES 103 can be continuously adjusted between 1 and 5000 Hz (60 - 300,000 flashes per minute). The high-power LEDs used ensure a particularly long service life of the light sources. At 6,000 flashes per minute and a distance of 30 cm, the stroboscope achieves an illuminance of 2,900 lux. A long operating time is achieved by the large Li-ion battery.

ISO cal option

» brightness: 3 High Power LEDs

» flash frequency up to 300.000 FPM

» 6160 lux at 30 cm / 1000 Hz

» adjustable flash duration and phase shift

Units: lux, footcandle / Micro-USB interface

The lux meter has a large measuring range of 0 ... 400 lux. The illuminance is measured using an external silicon photodiode with a spectral filter. This means that the lux meter can be positioned appropriately for every measuring task. The measured values can be displayed by the lux meter in lux and in footcandles. In addition to the normal measured value display on the lux meter, the measured value is also displayed on a scale.

The lux meter has additional functions so that an analysis of the illuminance can be carried out. With the additional functions of the lux meter, the largest and smallest measured value can be output using the "MIN" and "MAX" buttons.

Lux Meter class A according to DIN 5032-7 / data logger with 8 GB measured value memory

The lux meter is a precise measuring instrument that meets the highest demands for light measurements. In accordance with DIN 5032-7, it fulfils the requirements of precision class A, which enables accurate and reliable detection of light intensities. With an impressive measuring range of 0.000 lux to 500,000 lux, the lux meter is extremely versatile.

Whether for lighting control at the workplace, in exhibitions or outdoors - the lux meter covers a wide range of applications. Accuracy class A not only ensures precise measurements, but also high reproducibility of the results. This is particularly important in applications where accurate light measurements are crucial.

PCE-UV 40A

Simultaneous measurement of UVA and light

The light measuring device / lux meter is a highly developed instrument that is characterized by its versatility and precision. With its dual measurement channels, the light measuring device / lux meter enables the simultaneous measurement of UV-A radiation and visible light.

The external sensor allows the light measuring device / lux meter to be positioned flexibly to carry out precise measurements in different locations. This function is helpful, for example, when measuring UV lights for material testing according to the standards "EN ISO 9934-1 Non-destructive testing with magnetic powder" and "EN ISO 3059 Non-destructive testing, penetrant testing and magnetic particle testing

PCE-RS 40

Working length of 175 or 432 mm (6.9 or 17 in) / Diameter only 4 mm

Rigid borescope for visual inspection in small and narrow holes and cavities. With a diameter of 4 mm and a length of 175 or 432 mm / 6.9 or 17 in ,this rigid borescope is very versatile. The integrated LED lamp allows for a very good illumination of cavities to be inspected. For image transmission, this rigid borescope uses a lens system with a field of view of 45°. The rigid borescope is robust and designed for industrial environments. This rigid borescope provides very high resolution images with high sharpness. A mirror attachment is available as an option on this rigid borescope. The rigid borescope is very well suited for inspections of small objects.

ISO cal option

» diameter only 4 mm / 0.16 in
» LED bulbs
» working length 175 or 432 mm / 6.9 or 17 in

APPLICATION

PCE-VE 200 SERIES

Videoborescope for NDT machine diagnostics / Ø 4.5 mm or Ø 3.7 mm

The video borescope PCE-VE 200 is a nondestructive inspection camera.Thus, the video borescope is an ideal tool for diagnosing hard-to-reach areas.
For example, the areas of mechanical engineering, plumbing and heating, andthe entire construction / building industry are among the main application fieldsof the video borescope. Also, the video borescope is suitable for the use in the automotive industry. The fact that it has a one-meter camera tube makes it possible to use the video borescope in away that in many cases no disassembly of machines or motors is necessary. There are bright LEDs on thecamera head that can be controlled and adjusted by the user via the device.

ISO cal option

PCE-VE 270HR

Battery-operated inspection camera with 2.8 mm diameter

The inspection camera gives you new, visual insights into the interior of motors and systems. The inspection camera is the ideal tool for maintenance and repair in workshops or industrial companies. Optical analysis with an inspection camera has never been so easy. Guide the flexible cable through a hole or a cavity near the point to be inspected and look at everything on the display a the inspection camera. Thanks to the flexible guidance, the low weight and the excellent optics, you can use this inspection camera to identify weak spots and problem areas very easily and early and thus take preventive measures without having to carry out complex disassembly first.

PCE-VE 500N

WiFi inspection camera for Android and iOS / camera head Ø 4.5 mm

The WiFi inspection camera can be connected to a tablet or smartphone using the Android or iOS app. The WiFi borescope impresses with its simple handling and its robust construction. With the flexible, metal braided borescope cable, examinations under adverse operating conditions are possible with the WiFi borescope. The cable and head diameter is only 4.5 mm. The camera head of the WiFi borescope can be swiveled by 180°. This enables use in narrow cavities and visibility in almost all directions. 5 LEDs ensure that the areas and cavities to be examined are very well illuminated by the WiFi borescope. The brightness of the lighting can be adjusted in stages via the app. Images and videos can be saved in the WiFi borescope app.

ISO cal option

» image transmission via WiFi

APPLICATION

PCE-VE 800N4

4-way camera head / data storage / diameter 2.8 mm

The inspection camera has a 1.5 m / 4.9 ft long borescope cable. With a diameter of only 2.8 mm, cavities with the smallest access can be viewed with the help of this inspection camera. The camera head of the inspection camera can move freely in 4 directions. Especially in the maintenance of engines, turbines, etc., the high-resolution display of the inspection camera offers a good view of cavities and hard-to-reach places. The moveable camera has a resolution of 400 x 400 pixels. The field of view is 80°, which means that with a relatively short distance to the object to be inspected, very large images can still be taken with the inspection camera. All recordings of the inspection camera can be saved as an image or video.

APPLICATION

PCE-VE 1000

A Versatile 2-way Inspection Instrument

The endoscope PCE-VE 1000 is a versatile inspection instrument. Various endoscope cables with different properties can be connected to the endoscope.
A particular advantage of the endoscope is the large display, which due to its dimensions and resolution offers the user the best possible overview of the surface to be inspected. The endoscope allows the recording of pictures and videos, whereby the videos are additionally stored with an audio recording.
The clear resolution is also good when via button pressing the images are stored on the SD card, inserted in the endoscope. When the SD card is read out on the computer, the recorded pictures and videos are clearly displayed.

ISO cal option

» various endoscope cables are selectable and are optionally available

» storage of images and videos

» 8 GB memory card incl.

» LED lighting

» large 7 " LC display

TECHNICAL SPECIFICATIONS

PCE-VE 1500 SERIES

4-way camera head with electric motors / diameter Ø 2.2 … 6 mm

The 4-way system makes it possible to move the camera head from the endoscope camera in a 190° bending radius. The viewing angle is 120°. Control is via a joystick that drives the electric motors on the endoscope camera. Thanks to the particularly narrow camera head with a diameter between 2.2 … 6 mm, the endoscope camera can be used for endoscopy in, for example, engines, fire-arms, boreholes and other narrow openings. This means that the endoscope camera can be used to quickly and easily inspect weld seams, wear and damage in order to make quick diagnoses. The touch screen of the industrial endoscope has a size of 7".

ISO cal option

» 4-way camera head with electric motors

» 7" touch screen for easy operation

» exchangeable battery with status display

» recording storage on SD card

» motor with endoscope cable can be changed quickly

» HDMI connection for image transmission

» brightness adjustable in 5 steps

» 120° viewing angle and 190° bending radius

PCE-670

Mini handheld thermometer with large measuring range -33 ... 500 °C (-27.4 ... 932 °F)

Simple, handy handheld thermometer for non-contact measurement of surface temperature. The handheld thermometer has a display of the current temperature during the measurement. Within one second you get the surface temperature - the non-contact measuring method even from hot, dangerous or difficult to reach objects. The applications are virtually unlimited. Thus, this handheld thermometer can be used in the control of heating and air conditioning systems, underfloor heating, for detecting hot spots on electrical systems, etc. The emission value of this handheld thermometer is set to 0.95 and thus covers 90 % of all temperature measurement tasks.

ISO cal option

» IR temperature measuring range of -33 ... 500 °C / -27.4 ... 932 °F

» measured value display optionally in °C or °F

» automatic shutdown

» display of the current and maximum temperature

» last measurement is retained for 2 seconds

» measurement spot ratio 9 : 1

» easy to handle

» incl. battery and manual

APPLICATION

TECHNICAL SPECIFICATIONS

Temperature measurement range	-33 ... 500 °C / -27.4 ... 932 °F
Resolution	-9.9 ... 199.9 °C / 14.2 ... 391.8 °F : 0.1 °C / 0.18 °F
	<10 °C / 50 °F : 1 °C / 1.8 °F
	>200 °C / 392 °F : 1 °C / 1.8 °F

Optical resolution	9 : 1
Emissivity	0.95 (fixed)
Laser	Circle laser
	Class 2 <1mW
Operating time	About 30 h
Operating conditions	0 ... 30 °C / 32 ... 86 °F, max. 90 % rh
Storage conditions	-10 ... 40 °C / 14 ... 104 °F, max. 65 % rh
Power supply	1.5 V AA battery
Display	LC display
Dimensions	150 x 25 x 27 mm / 5.9 x 1 x 1.1 in
Weight	About 74 g / <1 lb

Optional accessories:

PCE-MS 25	Measuring Point Sticker

PCE-895

Cross laser thermometer for non-contact measurement tot 1600 °C

The Dual Laser Digital Thermometer PCE-895 is used for fast surface temperature measurement. The two laser points of the dual laser thermometer PCE-895 mark the exact measuring point and thus offer excellent assistance with the temperature measurement. Due to the cross laser function, the two laser spots indicate exactly how large the actual IR spot is. The emissivity of the dual laser thermometer

PCE-895 is adjustable in the range of 0.10 ... 1.0. Thus, the dual laser thermometer PCE-895 is suitable for almost all surfaces. The temperature measuring range extends from -35 ... 1600 °C / -31 ... 2912 °F. In addition to the IR function, a type K thermocouple can also be connected to the dual laser thermometer.

ISO cal option

» non-contact temperature measurement

» 60 :1 optics

» temperature measurement up to 1600 °C / 2912 °F

» compact cross laser thermometer

» double laser shows the spot diameter

» adjustable emissivity

» adjustable emissivity

» alarm function

PCE-ILD 10

Measuring range -50 ... 500 °C/ Contrast ring with five LEDs

The pyrometer has a measuring range of -50 ... +500 °C (-58 ... 932 °F) and an adjustable emission value between 0.10 ... 1.00. In addition to the current reading, the largest, smallest, average and differential reading can be displayed. This means that the infrared thermometer can be used for many measuring tasks to determine the surface temperature. The multi-point laser on the infrared thermometer is used to align the measuring spot. The measuring spot ratio of the infrared thermometer is 12:1.

Any alarm limit values can be stored on the pyrometer for checking temperatures. When exceeding or falling below an alarm limit value, the infrared thermometer automatically triggers an acoustic and visual alarm.

ISO cal option

» measuring range -50 ... 500 °C / -58 ... 932 °F

» fast measuring rate of 2 Hz

» white and blue lighting ring

» spot ratio: 12:1

PCE-TC 30N

Temperature range -20 ... 450°C / -4 ... 842°F / Resolution 160 x 120 pixels

The PCE-TC 30N thermal imaging camera for preventive maintenance is the ideal tool for preventative maintenance. This thermal imaging camera is a must-have for electricians, fitters, or general maintenance personnel for trouble shooting and fault prevention on electrical equipment, electromechanical equipment, production process machinery, heating, ventilation, and air conditioning systems, especially when working in harsh environments. The operator can use the PCE-TC 30N high-resolution thermal imaging camera for preventive maintenance, to detect evolving faults on machinery and equipment. The preventive maintenance and service is thus made easy.

ISO cal option

» IR resolution: 160 x 120 pixels

» measuring range: -20 ... 450°C / -4 ... 842°F

PCE-TC 33N

Measuring range up to 300 °C / Thermal sensitivity 70 mK

The infrared thermometer PCE-TC 33N is the ideal tool for repair work and prevention measures. This thermal imager is a must-have for electricians, fire fighters, locksmiths, or general service personnel for trouble shooting and fault prevention on electrical equipment, electromechanical equipment, production process machinery, heating, ventilation, and air conditioning systems, especially when working in harsh environments. In preventative maintenance, the high-resolution PCE-TC 33N thermal imager is ideal for maintaining or repairing machinery or other equipment. At the heart of the PCE-TC 33N high-resolution thermography camera is an uncooled microbolometer (uncooled focal plane array) with a resolution of 220 x 160 pixels.

ISO cal option

» IR resolution: 220 x 160 pixels

PCE-TC 34N

With 3 GB memory / Measuring range -20 ... 300 ºC

The thermal imager has a resolution of 320 x 240 pixels. With a measuring range of -20 ... 300 ºC, the thermometer already covers a large temperature range. In order to carry out measurements on different surfaces, the emission value of the thermometer can be set between 0.01 ... 1.00 ⬚. During the measurement, the coldest and the hottest temperature of the surface at which the thermometer is pointed are displayed in addition to the spot temperature. For a better analysis of the temperature, the thermal image displayed on the thermal imager can be displayed in five different color palettes: rainbow, iron, cold colors, white-black (+inverted).

ISO cal option

» measuring range -20 ... 300 ºC / -4 ... 572 ºF

» storage for about 20,000 images

» picture in picture function

» field of view 35º x 26º

» USB-C interface for transmission

APPLICATION

PCE-LDC 8

Leak detector for compressed air lines / operating frequency 40 kHz

The Gas Leak Detector is used to locate leaks on compressed air lines. Furthermore, the Gas Leak Detector can also be used on coolant lines or gas lines for leak detection. The Gas Leak Detector is equipped with an ultrasonic sensor that can precisely detect leaks in air lines. The ultrasound sensor from the Gas Leak Detector works at a frequency of 40 kHz. This means that the Gas Leak Detector is calibrated to the medium frequency that leaks on pressure lines emit. This is in the range between 20 ... 80 kHz. A high-pass filter in the leak detector ensures that all noises are filtered at a frequency <40 kHz in order to perform a better leak detection. An integrated amplifier element in the leak detector ensures that the high-frequency tones.

ISO cal option

» working frequency of 40 kHz

» easy to use

» up to 6 h battery operation

» Leak detection via headphones and LCD display

» robust and ergonomic

» can be used over long distances

TECHNICAL SPECIFICATIONS

measuring principle	Ultrasonic
measuring medium	Air, coolant, non-explosive gases
operating frequency	40 kHz ± 2 kHz
connections	3.5 mm jack plug for sensor
	3.5 mm jack plug for headphones and charger
display	LC display
power supply	NiMH battery
operating time	approx. 6 h without laser pointer
	approx. 4 h with laser pointer
charging time	about 1.5 h
operating temperature	Normal operation: 0 ... 40 ° C
	Charging mode: 10 ... 40 ° C
laser	2nd grade; <1mW; 650 nm
Dimensions	7.54 x 3.44 x 2.09 in; 191.5 x 87.5 x 53 mm
Weight	approx. 250 g

Measurement options pressure vs. Diameter / range

print	diameter	Range
0.5 bar	0.1 mm	6.6 ft, 2 m
	0.2 mm	6.6 ft, 2 m
	0.5 mm	32.8 ft, 10 m

print	diameter	Range
5 bar	0.1 mm	26.2 ft, 8 m
	0.2 mm	45.9 ft, 14 m
	0.5 mm	59.1 ft, 18 m

APPLICATION

PCE-LDC 15

Leakage detection via sound/noise measurement / operating frequency 40 kHz

The leak detector is used in various areas of industry. For example, the leak detector is used on compressed air, gas, steam and vacuum systems, as well as on refrigeration systems and door seals. The working frequency of the leak detector is 40 kHz (± 2 kHz). The sound-proof headphones on the leak detector ensure that it can also be used in extremely noisy environments. The leak detector is used wherever gases can escape from leaks in piping systems. The noises caused by the outflow are often in the ultrasonic range and are therefore imperceptible to the human ear.

ISO cal option

» working frequency 40 kHz (± 2 kHz)

» operating time >10 hours

» various attachments

» transport case for safe transport

» easy to use thanks to the touchscreen

» soundproof headphones

TECHNICAL SPECIFICATIONS

Working frequency	40 kHz (± 2 kHz)
Laser	wavelength 630 ... 660 nm, output power <1mW (laser class 2)
Color display	3.5" touch panel TFT
Connections	3.5 mm jack plug for headphones, power supply socket for connecting an external charger USB port for software updates
Power supply	internal 7.4 V lithium-ion battery
Charging time	max. 4 hours
Operating time	>10 h (continuous operation)
Degree of protection	IP20
Operating conditions	-5 ... +50 ºC / 23 ... 122 ºF, <95 % RH, non-condensing
Storage conditions	-20 ... 60 ºC / -4 ... 140 ºF, <95 % RH, non-condensing
Altitude	4000 m above sea level
Permitted Pollution degree	2
Dimensions	263 x 96 x 280 mm / 10.3 x 3.7 x 11" (with preamplifier and horn)
Weight	0.55 kg / 1.2 lb with preamplifier and horn, complete set in case approx. 3.0 kg / 6.6 lb

APPLICATION

PCE-GA 10

Gas leak detector for flammable gases / Optical, acoustic and haptic alarm

The gas leak detector PCE-GA 10 is used to check for leaks in gas pipes and connections. This gas leak detector is suitable for many flammable gases. The gas leak detector has 5 LEDs that inform the gas intensity. In addition to the visual information, the gas leak detector has an audible and haptic alarm. This means that, depending on the level, the gas leak detector emits an alarm tone and vibrates at the same time. The leak detector is therefore ideal for detecting sporadic gases. The gas leak detector is therefore of great help to employees who want to inspect plants during a plant tour or inspect engines, supply lines or gas lines. The gas leak detector is supplied with a rechargeable battery.

ISO cal option

» LED display

» for flammable gases

» 500 mm sensor

» optical, acoustic and haptic alarm

» fast response time

» rechargeable battery

PCE-GA 12

Gas flammable gas detector / Measured value display up to 10000 ppm

The gas detector PCE-GA 12 is a very easy-to-use measuring device. This gas detector detects combustible gases and emits a vibrating alarm as well as an audible alarm once a combustible gas has been detected by the gas detector. Thanks to the semi-rigid hose on the gas detection device, the sensor can be aligned in almost any position to reach even inaccessible places.

This makes the gas detection device an ideal measuring device for employees who want to detect sporadically escaping gases (testing of plants during a tour of the plant, checking engines and supply lines, testing gas supply lines). A manual setting of the gas detector is not necessary as the gas detector automatically calibrates.

ISO cal option

» audible alarm with 85 dB

» rechargeable battery for mobile use

» automatic calibration

» measuring range up to 10000 ppm

» for the detection of combustible gases

» durability of the sensor about 5 years

» vibrating alarm when detecting gases

» sensor changeable

Battery	Polymer Li-ion battery 18500 3.7 V
Power adapter	Primary side: 100 ... 240 V, 50/60 Hz, 0.2 A Secondary side: 5 V, 1 A
Automatic shutdown	turns off if the battery capacity is too low by itself or after 10 minutes if not used.
Sensor durability	about 5 years (sensor is interchangeable)
Probe	semi-rigid 400 mm / 16"
Weight	about 430 g / <1 lb

APPLICATION

PCE-COM 20

With wide measuring range of up to 112 % IACS or 65 MS/m

The conductivity tester for measuring the electrical conductivity of non-ferrous metals such as aluminium or copper belongs to the group of NDT devices. The conductivity tester is used in non-destructive material testing. By means of the eddy current measuring principle which has proven for this application, the electrical conductivity of metallic materials can be determined quickly and precisely. With its operating frequency of 60 kHz, the conductivity tester has a wide measuring range of 0.51 ... 112 % IACS and reaches an accuracy of +/-0.5 % at 20 °C, with a resolution of up to 0.01 % IACS.

ISO cal option

» user-friendly hand-held meter

» memory for up to 500 groups of measurements

» durable internal rechargeable battery

» lift-off and temperature compensation

» adjustable backlight

» for mobile use

» automatic calibration

» operating frequency of 60 kHz

» incl. 3 calibration plates (titanium 1.03 % IACS, bronze 8.11 % IACS and copper 100 % IACS)

APPLICATION

TECHNICAL SPECIFICATIONS

Operating frequency	60 kHz, sine wave
Conductivity measuring range	0.51 % IACS ... 112 % IACS

PCE-MFM 2400 SERIES

Tesla and Gauss measurement for static magnetic fields

With a measuring range up to 2,400 mT, the electromagnetic field meter covers a wide range of measuring tasks. The electromagnetic field meter has an accuracy of 1 % which makes it a very precise meter. The electromagnetic field meter can be used, for instance, to test relays and permanent magnets for existing magnetic fields. It is therefore often used in production processes or in quality control.
With the backlight of the electromagnetic field meter, the measured values are always easy to read even under poor lighting conditions.

ISO cal option

» very precise measurement technology

» measuring range up to 24,000 G and 2,400 mT

» transversal and axial sensor

» measures static magnetic fields

» automatic shutdown

TECHNICAL SPECIFICATIONS

APPLICATION

PCE-TDS 200 SERIES

Flow velocity / volume flow and volume / heat quantity

The flow meter has a measuring range of ±32 m/s. With an accuracy of ±1.5 % f.s. for a pipe diameter of DN ≥50, ±3.5 % f.s. for a pipe diameter of DN <50 and a reproducibility of ±0.5 % f.s., the flow meter is a particularly precise measuring device. The installation aid graphically displays the signal quality from the flow meter. In addition, it is graphically displayed whether the sensors of the flow meter are positioned

at the correct distance from each other. To carry out flow measurement with the flow meter, the flow velocity, the volume flow and the volume are displayed after entering the pipe and medium specifications.

ISO cal option

» measuring range: ±32 m/s

» reproducibility of ±0.5 % of the measured value

» various ultrasonic probes available

» heat quantity measurement (only PCE-TDS 200+ series)

» data memory for 10 million measuring points (32 GB)

» individually adjustable alarm limits

» USB-C interface for data transfer

» optional: software and calibration certificate ISO or DAkkS

PCE-HWA 30

Hot wire anemometer/ Telescopic arm with swiveling head / Measuring range 0.3 ... 30.0 m/s

The air flow meter measures the flow velocity according to the hot wire principle. This guarantees a particularly compact design. The measuring range of the hot wire anemometer is between 0.3 ... 30.0 m/s / 0.98 ... 98.4 ft/s. In addition to the flow velocity, the hot wire anemometer can measure the volume flow and the ambient temperature. For each measurement, a Beaufort scale is displayed next to the measured value. The current wind strength can be read from this scale. With the integrated data memory, up to 960 measured values can be recorded with the air flow meter. The data can be read directly on the hot wire anemometer.

ISO cal option

» hot wire anemometer with data storage

» software for reading out the measured values

» swiveling telescopic arm

» measuring range 0.3 ... 30.0 m/s / 0.98 ... 98.4 ft/s

» data memory for 960 measured values

» beaufort scale

PCE-AM 45

Air velocity meter with Beaufort scale / Measuring range 0.3 ... 45.0 m/s

The multifunction air velocity meter determines the wind speed via an impeller with a diameter of 65 mm / 2.5". The anemometer can reliably determine the speed in a measuring range of 0.3 ... 45.0 m/s / 0.9 ... 147 ft/s. In addition to the speed measurement with the anemometer, a volume flow measurement can also be carried out. In addition to the normal measured value display on the anemometer, a

Beaufort scale is stored. The wind strength level is displayed directly on the Beaufort scale on the anemometer. Depending on the orientation of the impeller, the multifunction air velocity meter can also be used to determine the wind direction. This is made possible by the anemometer's built-in gyroscope.

ISO cal option

» battery operation for mobile use

» telescopic probe with a length of 270 ... 540 mm / 10.63 ... 21.26"

» impeller opening of 65 mm / 2.5"

PCE-CTI 10

Measuring range 0 ... 1500 V AC/DC / with Bluetooth 4.0 interface

The digital multimeter is the ideal measuring device for measuring voltages up to 1500 V AC/DC and currents up to 1000 A AC/DC. The current measurement with the clamp meter is inductive. To do this, the supply line is placed in the clamp meter. This has the particular advantage that the current can be measured during operation. This means that the clamp meter is used, for example, for maintenance work on a photovoltaic system. Photovoltaic systems consist of many different solar cells that are connected in series with one another. Here, the current clamps can be used to measure the individual currents of individual rows in order to limit possible errors.

ISO cal option

» measuring range 0 ... 1500 V AC/DC

» data logging for up to 100,000 measured values

» inrush current measurement

» additionally with LowZ voltage measurement

» 2.36" TFT display

» with voltage and temperature measurement

» optionally with calibration certificate

Measuring range	0.0 ... 600.0 V

PCE-DC 25

Current measurement 0 … 1000 A AC/DC / Electrical tester with Bluetooth interface

The electrical tester has a measuring range of 0… 1000 A AC/DC. The current is measured inductively using the clamp on the measuring device. Live supply lines with a diameter of up to 32 mm (1.2") can be connected to the clamp meter. With the optional Rogowski coil, the measuring range of the clamp meter can be extended to up to 3000 A AC. The clamp meter has sub-functions for current measurement. The inrush current can be measured with the clamp meter. This is a particularly important function, as motors such as those installed in ventilation systems or hall lighting require a particularly high current when switched on. The electrical tester can be connected to an Android or iOS device via the Bluetooth interface.

ISO cal option

» measuring range 0 … 1000 A AC/DC
» bluetooth interface
» inrush current measurement
» not Connected Voltage function
» LC colour display
» optionally with ISO certificate

PCE-TG 75

Material thickness measurement up to 225 mm

The thickness meter can measure material thicknesses up to 225 mm / 8.85". So that the material thickness of a wide variety of homogeneous materials can be measured, it is possible to store the corresponding speed of sound in the thickness meter. For materials such as steel, aluminum, zinc, silver and gold, the appropriate sound speeds are already stored in the device library. This means that the thickness meter can be used universally. With the limit value function in the thickness meter, individual maximum and minimum values can be stored. If the measured value of the test piece is outside the limits, the thickness meter signals this visually.

ISO cal option

» measured value memory

» calibration reference on the housing

» automatic shutdown

» material thickness measurement up to 225 mm / 8.85"

» battery status indicator

» optionally with ISO calibration certificate

TECHNICAL SPECIFICATIONS

Measuring range	1.00 ... 225.0 mm / 0.04 ... 8.85"
Resolution	0.01 mm at ≤99.99 mm
	0.1 mm at ≥100.0 mm
Accuracy	±0.5 % of measured value + 0.05 mm
Storage space	500 measured values
Probe frequency	5 MHz
Standard sensor	sensor PCE-TG 5M10d

Further specifications

Adjustable speed of sound	
1000 ... 9999 m/s	
Smallest pipe diameter	Ø 20 x 3 mm (steel)
Material library	15 memory locations
Calibration reference	4 mm
Display	2.4 inch TFT LCD color display
	with brightness adjustment
Power supply	3 x 1.5 V AA batteries
Automatic switch-off	switched off, 2, 5, 10, 30 minutes
Ambient conditions	0 ... 40 °C / 32 ... 104 °F, <90 % RH, non-condensing
Dimensions	163 x 82 x 38 mm / 6.4 x 3.2 x 1.5"
Weight	320 g / 11.2 oz

Optional accessories:

Standard probe for the PCE-TG 75/150	Order no.: PCE-TG 5M10d

APPLICATION

PCE-TG 300 SERIES WITH BLUETOOTH

With a wide measuring range of up to 600 mm

The PCE-TG 300 is a wall thickness gauge with special probes for various applications. In general, the wall thicknesses of all homogeneous materials can be measured with the PCE-TG 300. For damping or scattering materials such as plastic or cast iron, a special probe is available. An angled 90 ° probe also enables measurements at hard-to-reach measuring positions. The speed of sound can be set freely
and thus adapted to a wide variety of materials. The measured values are displayed directly on the easy-to-read TFT colour display.

ISO cal option

» wide measuring range
» various probes available
» battery operation
» fault and cavity detection
» internal measurement data memory
» printing via Bluetooth

Minimum pipe diameter	30 mm
Description	for high temperatures (max. 300 ℃)

PCE-CT 65

For measuring the colour thickness on ferrous and non-ferrous metals

PCE-CT 65 is a coating thickness gauge that uses magnetic induction (ferrous) or eddy current (non-ferrous) to take non-destructive measurements of coating and dry film thickness (DFT) on metal substrates such as steel and aluminum. This thickness gauge is ideal for painted and powder-coated surface testing, automotive paint inspection, coated material testing, and manufacturing quality control applications. The easy-to-use downloadable PC-compatible software included with this thickness gauge allows for detailed analysis of measurement results via computer. Measurement values are shown in a table and different working modes can be selected for data filtering.

ISO cal option

» for ferrous and non-ferrous metals

» immediately ready to measure

» large measuring range

» measured value memory for up to 1500 measurements

» two measuring modes

» comfortable one-hand operation

» comes with storage case

» calibration plates for accuracy testing

TECHNICAL SPECIFICATIONS

Ferrous metals

Principle	Magnetic induction
Measuring range	0 ... 1350 µm / 0 ... 53.1 mils
Accuracy	0 ... 1000 µm: (±2.5 % ±2 µm)
	1000 µm ... 1350 µm: ±3.5 %
	0 ... 39.3 mils: (±2 % ±0.08 mils)

Min. substrate thickness	0.3 mm / 0.01 in
Units	µm, mils
Functions	Alarm function, display lighting, automatic shutdown, calibration, memory function
Memory option	30 storage groups with a capacity of 50 measurements each = 1500 measurements total
Interface	USB
Environmental conditions	0 ... 40 °C / 32 °F ... 104 °F, 20 % ... 90 % rh
Power supply	2 x 1.5 V AAA batteries

APPLICATION

PCE-CT 26FN

For iron and non-ferrous substrates

The coating thickness gauge PCE-CT 26FN can measure non-destructive coatings (paints, plastics ...) on steel / iron and non-ferrous metals. The coating thickness gauge is ideally suited, for example, to detect accidental damage to the vehicle immediately. But also in the industrial sector, the PCE-CT 26FN coating thickness gauge is used for incoming and outgoing inspection in order to be able to offer consistently

consistent product qualities.
The ergonomically shaped coating thickness gauge with integrated probe and very simple operation allows you to quickly determine measurement results with high accuracy.

ISO cal option

» immediately ready to measure

» wear-resistant sensor

» V-groove for measurement on pipes

» one-handed operation

» ISO calibration optional

» incl. transport case

TECHNICAL SPECIFICATIONS

Measuring range	0 ... 1250 µm (0 ... 49.2 mils)
Resolution	1 µm (0.039 mils)
Accuracy	±(3 % + 2 µm) or ± (3 % + 0.079 mils)
Smallest measuring surface	5 x 5 mm / 0.2 in x 0.2 in
Smallest radius of curvature	Convex. 3 mm (0.1 in) / concave: 50 mm (2 in)
Smallest thickness of the base material	Fe: at least 0.5 mm / 0.02 in
	NFe: at least 0.3 mm / 0.01 in
Display	OLED display
Ambient temperature	0 ... 50 ℃ / 32 ... 120 ºF
Power supply	2 x AAA battery 1.5 V
Dimension	100 x 52 x 29 mm / 4 x 2 x 1.1 in
Weight	About 68 g / <1 lb (without batteries)

APPLICATION

PCE-CT 29

Measuring range of 0 ... 2000 μm / Micro-USB / visual and acoustic alarm

The material tester has a measuring range of 0 ... 2000 μm. The material tester can measure the coating thickness on ferrous (Fe) and non-ferrous (NFe) metals.
For a better analysis of the measurements, the coating thickness gauge has a measuring function based on the SSPC standards. With this function, the corrosion protection of a coating can be checked

with the material tester. The group function stores the measured values directly. A memory of 50 groups with 50 measurements each is available. In each group, statistics are created for all measured values from the material tester. All measurement data and statistics can be recalled after a measurement run.

ISO cal option

» measuring range 0 ... 2000 μm

» with SSPC measuring function

» individually adjustable limit value alarms

» data memory with up to 2500 measured values

» temperature and humidity measuring function

» optionally with ISO calibration certificate

APPLICATION

TECHNICAL SPECIFICATIONS

Measurement on ferrous metal (Fe)	
Measuring range	0 ... 2000 μm
Resolution	0.1 μm @ 0.0 ... 99.9 μm
	1 μm @ 100 ... 2000 μm
Accuracy	±(2 % ±2 μm of Mw.)
Repeatability	±(1 % ±1 μm of Mw.)
Smallest radius of curvature	1.5 mm
Smallest measuring area	Ø 7 mm
Smallest layer thickness	0.5 mm

Measurement on non-ferrous metal (NFe)	
Measuring range	0 ... 2000 μm
Resolution	0.1 μm @ 0.0 ... 99.9 μm
	1 μm @ 100 ... 2000 μm

PCE-CT 80 SERIES

Paint layer thickness gauge for Fe and NFe

The paint layer thickness gauge PCE-CT 80 is a measuring device for the non-destructive measurement of coatings (lacquers, paints, plastics ...) on steel / iron and non-ferrous metals. Thanks to the externally connected sensor on the PCE-CT 80 paint coating thickness gauge, even difficult-to-reach measuring locations can be easily reached. The menu navigation of the paint thickness gauge allows easy adjust-

ment and setting to new parameters and makes this handy paint coating thickness gauge an indispensable tool for control measurements in production, workshop and quality assurance.

ISO cal option

» for many materials such as iron, steel, aluminium, copper, brass and stainless steel

» measurements cannot be influenced by vibrations

» practical V-groove on the measuring heads

» internal data memory

» warning for measurements exceeding the measuring range

» wear-resistant, spring-mounted measuring head for precise measurement results

» all PCE-CT 80 HP models feature a particularly high accuracy

APPLICATION

TECHNICAL SPECIFICATIONS

Measurement range	Fe: 0 ... 5000 µm / 0 ... 196.9 mils (depending on probe)
	NFe: 0 ... 3000 µm / 0 ... 118.1 mils (depending on probe)
Accuracy	
PCE-CT 80 Serie	±(2 % v. Mw. + 1 µm)
PCE-CT 80 HP Serie	±(1 % v. Mw. + 1 µm)
Resolution	0.1 µm (<100 µm)
	1 µm (>100 µm)
Measurable materials	Non-magnetic layers on steel, iron, ...
	Non-electrically conductive layers on aluminium, copper, ...
Min. radius of curvature convex	5 mm
Min. radius of curvature concave	25 mm
Min. measuring surface	Ø 17 mm
Min. layer thickness	0.2 mm (on magnetic materials)
	0.05 mm (on non-magnetic materials)
Probe mode	Autom. mode with material detection (Fe + NFe)
	Magnetic mode (Fe)
	Eddy current mode (NFe)
Measurement modes	Single measurement
	Continuous measurement
Calibration	Multipoint calibration (1 ... 4 points for each group) zero point calibration
Units	µm, mm, mils
Data transfer	USB 2.0
Memory	One volatile measuring group (DIR mode)
	Four measuring groups with autom. storage and max. 2000 readings (GEN mode)
Statistical functions	Number of measured values, mean, minimum, maximum, standard deviation
Alarm	Display when the adjustable upper and lower alarm limits are exceeded
Operating time	Auto Power Off mode (3 min)
Power supply	3 x 1.5 V AAA batteries
Display	128 x 128 px LCD
Displayed information	Battery status / flaw detection
Operating conditions	0 ... 50 ºC / 32 ... 122 ºF / 20 ... 90 % RH not condensing
Storage conditions	-10 ... 60 ºC / 14 ... 140 ºF / 20 ... 90 % RH not condensing
Dimensions	143 x 71 x 37 mm / 5.6 x 2.8 x 1.5 in (L x W x H)
Weight	with sensor and batteries: approx. 271 g / <1 lb

PCE-DFG N 10K

With external measuring cell and USB interface for connection to a PC

The force gauge measures both tensile and compressive forces with a very high resolution. Tensile and compressive forces are often measured in test laboratories, for example to determine the yield strength, the pull-off force and the force required to actuate a push-button or switch. The force gauge is supplied with an external measuring cell. The PCE-DFG N 10K force gauge can measure up to 10,000 N / 2,248 lbs. Models for 1,000 N / 225 lbs, 2,500 N / 562 lbs and 5,000 N / 1,124 lbs are also available. Various eyelets or hooks with M10 or M12 threads can be screwed into the measuring cells but other devices with the same thread can also be attached to the measuring cell.

ISO cal option

» USB interface
» memory capacity for 100 measurements
» incl. ISO calibration certificate
» graphical display
» fast response time
» PC software

APPLICATION
TECHNICAL SPECIFICATIONS

Measurement range	0 ... 10,000 N / 0 ... 2,248 lbs
Resolution	5 N
Accuracy	±0.1 % of the measuring range
Units	N, kg, lb, KPa
Display	2.8 " TFT graphical display
Alarm modes	inside, outside, crack, shutdown
Sampling rate	6 ... 1600 Hz
Memory	100 measurements, 8000 values each
Power supply	rechargeable NiMH battery, 6 V / 1600 mAh
Battery life	approx. 10 h
Mains / charging adaptor	12 V / 1 A
Outputs	Interface: USB
	Switching output: 12 V / 50 mA
Protection class	IP 54
Operating and storage conditions	-10 ... 50 ºC / 14 ... 122 ºF
	5 ... 95 % RH non-condensing
Mounting thread measuring cell	
up to 1000 N / 225 lbs	M10
2500 ... 10000 N / 562 ... 2,248 lbs	M12
Dimensions	200 x 97 x 42 mm / 7.9 x 3.8 x 1.7
Weight	540 g / 1.2 lbs

Optional accessories:

PCE-DFG N 500

Digital force gauge for tensile and compressive force measurement up to 500 N

The PCE-DFG N 500 is a digital force gauge for tensile and compressive force measurement up to 500 N. It has a resolution of 0.1 N. The measured values are shown on a large display with backlight which is rotatable by 180 °. Therefore, reading the measured values correctly is possible in any position and at any time. The outstanding accuracy of ±0.1 % f. s. is confirmed by the factory calibration certificate that comes with the meter.

In addition to the internal memory with sufficient capacity for 100 readings, a USB interface is available for data transfer.

ISO cal option

» tensile and compressive force measurement
» 1600 Hz sampling rate
» error limit 0.1 % of the measuring range
» PEAK function (MIN / MAX)
» limit value function
» various units of measurement
» automatic or manual storage
» graphical evaluation
» display with automatic orientation
» time / date
» control and evaluation software
» auto power off adjustable
» battery level indicator
» mains operation possible
» memory capacity for 100 measurements

PCE-DFG NF 1K

Measurement of compressive forces with external load cell

The force gauge with an external load cell is designed for the measurement of compressive forces in hard-to-reach measuring locations. The pressure cell is connected to the force gauge by a sensor cable of approx. 3 m length and thanks to the small cell dimensions, it ensures versatile applications. The force gauge/load cell has several threaded holes at the bottom to enable fixed installation. The force gauge can operate at a sampling rate of up to 1600 Hz. The sampled readings are displayed as an instantaneous value as well as in a graph showing the measurement curve directly in the force gauge.

ISO cal option

» USB interface

» graphical display

» fast response time

» PC software

» incl. calibration

» memory for 100 measurements

## APPLICATION

PCE-PFG 500

With internal S load cell

The PCE-PFG dynamometer is a handy, digital measuring device for measuring tensile and compressive forces. The force measuring device offers a sampling rate of 500 Hz and various measurement options such as real-time measurement (RT), maximum value measurement (PEAK), configurable average value acquisition (Average) and automatic measurement storage of up to 100 measurements. The measurement data and a statistical evaluation of the data stored in the force measuring device (MIN / MAX / average) are shown on the graphic display and can be transferred to a PC via the USB interface. In addition, the force measuring device offers a limit value function MIN / MAX, which can switch a multi-colored LED and switching contacts.

ISO cal option

» 4 measurement modes (real-time measurement / maximum value / average measurement / automatic memory measurement)

» internal memory for up to 100 measured values

» statistics evaluation (MIN / MAX / average)

» rotatable display

» alarm function with multi-colored LED (yellow / green / red) and switching contact output 2.85 V.

» USB B interface

» battery life up to 36 hours

APPLICATION

PCE-DFG 2000 SERIES

Measurement range up to 200 kN / sampling rate 2000 Hz

The force gauge PCE-DFG 2000S and the PCE-DFG 2000E is supplied with an external measuring cell. Depending on the model, the force gauge can measure up to 200 kN. Various eyes or hooks with M10 or M12 thread can be adapted into the measuring cells. However, own devices with this thread can be mounted to the measuring cell. The measured data can be stored and exported. Operation is simple and the evaluation can be used for various analyses, for example in Excel tables. The PCE-DFG 2000I force gauge has an internal load cell and is supplied with five different load cells.

ISO cal option

» data analysis
» internal memory for 200 data sets
» up to 200 kN
» incl. software
» 2000 Hz
» graphic display

TECHNICAL SPECIFICATIONS

Sampling rate	High speed version 2000Hz
Measurement range	0 ... 20.000 kg / 0 ... 200 kN
Non-linearity	>0,01 %
Display	-99999~999999
Signal input	-15~15 mV
Temperature drift	<20 ppm
Built in battery	3200mAh battery
Battery life	approx. 10 h
Real-time monitoring	automatically capture peak and valley values and analyze sensor status
Memory	up to 200 records
Connection / Interface	USB-C connector
Alarm	signal tone exceeding of the adjustable upper and lower

PCE-DFG 2000S

PCE-DFG 2000E

PCE-DFG 2000I

APPLICATION

PCE-HFG SERIES

For the measurement of compression forces in mechanical systems

The hydraulic force transducer PCE HFG series is used for the absorption of static pressure forces and is made of stainless steel. The force transducer can measure forces over a long period of time due to its independence from power sources. With the integrated drag indicator the respective PEAK value is stored for later read out. The force transducer uses the measuring principle of hydraulic transmission of forces. The forces applied to the plunger are transmitted to the dial gauge via the medium and are displayed on the Newton scale [N]. Due to the 27 mm ring opening, it is also possible to use the force transducer axially and to determine axial shaft forces, for example.

ISO cal option

» measurement of static pressure forces

» for stationary maintenance measurements and adjustment work

» independent of power sources

» analogue meter scale

» compact for small installation spaces

» pressure force display in kilonewtons [kN]

» stainless steel

» integrated drag indicators

PCE-DFG N 100TW

Torque meter up to 100 Nm / external torque transducer 1/2 " internal square

The torque wrench tester consists of a handheld measuring device and an external torque transducer. The torsion transducer is connected to the hand-held device via a 1.5 m / 4.9 ft long cable and thus enables installation in a test stand or direct assembly on a test bench. The torque measuring device is delivered adjusted so that the control measurements can be started immediately. A calibration certificate is optionally available for the torque measuring device. This certificate is a target / actual comparison on a traceable reference standard and thus serves as proof of the measurement accuracy. The measurement uncertainty of the torque measuring device is only 0.5 % of the measuring range.

ISO cal option

» left / right torsion measurement

» error limit 0.5 % of the measuring range

» graphic display

» PC software

» PEAK / Hold function

» 1600 Hz sampling rate

» power adapter and battery operation possible

» the direction of rotation must be selected

Closing force measurement system for elevator doors

The closing force measuring device is an electronic measuring device for elevator doors and protective devices on machines. Typical use is both the final acceptance of new systems and regular inspection. Its uncompromising design combines precision with practical robustness and ensures accurate measured values even after years of use in harsh environments.

In the case of cyclical measurements on objects with several elevators, a quick and easy implementation is of great importance. For this purpose, software was developed that drastically reduces the measurement process and the effort required for documentation.

FM200 SERIES

Closing force measuring system for sliding roofs, window lifters, tailgates

The closing force transducer is an electronic closing force measuring device for power-operated windows, sliding roofs and tailgates in the automotive sector. Typical areas of application are testing and production in the automotive industry. It is also increasingly used by technical inspection institutions. Its uncompromising design combines precision with practical robustness and ensures accurate measured values even after years of use in harsh environments. For measurement set-ups in testing and manufacturing, quick and easy execution is of great importance. For this purpose, Drive Test has developed software that drastically reduces the measurement procedure and the effort required for documentation.

| ISO | calibrated |

» support of relevant standards - 2000/4 EC, US Standard FMVSS 118

» precise measurements - through frictionless guidance and platform load cell

» easy to use - single button operation or remote operation via Microsoft® DLL

» interface or National Instruments ® LabVIEW library

» complete scope of delivery - including high-quality carrying case and software

» professional, comprehensive PC software - PinchPilot

» extensive user support - calibration service, standards revision service ensures the

» application of the latest standard version

» flexible customisation - made possible by a variety of available force inputs:

» customised adaptations also available from DriveTest

APPLICATION

TECHNICAL SPECIFICATIONS

FM200

Accuracy	+/– 3 N oder 3 % of measured value
Gap width	Minimum 4 mm
Area	50 x 50 mm
Measuring principle	DMS-transducer
Dimensions	240 x 85 x 60 mm
Weight	1,3 kg

Models:

FM200-SU-SY-10-200	stiffness	**10 N/mm**	measuring range	**0 ... 200 N**
FM200-SU-SE-20-300	stiffness	**20 N/mm**	measuring range	**0 ... 300 N**
FM200-SU-SE-65-300	stiffness	**65 N/mm**	measuring range	**0 ... 300 N**

PC-Analysis-Software PinchPilot
- Multilingual (DE, EN, IT, FR, ES)
- Graphical display of force vs. time
- Calculation of relevant parameters
- Assessment with respect to different standards
- Support for user defined standards

DriveTest
A COMPANY OF PCE INSTRUMENTS

FM205-WI-SY-10-150

Closing force measuring system for window lifters

The FM 205 is an electronic force measuring system for powered window lifters. Typical use includes R+D and production testing in the automotive industry. The FM 205 is characterized by its ease of use for repetitive measurements. According to the requirements of different standards a large variety of spring stiffnesses is available. It is also increasingly used by technical safety agencies. Combining

rugged construction with precision, the advanced mechanical design delivers exact measurements, even after years of service in an industrial environment. Fast and easy performance of repetitive measurements is an important aspect of standard test scenarios.
Drive Test has responded to this requirement by developing software which streamlines the measurement process.

ISO calibrated

» support of relevant standards - 2000/4 EC, US Standard FMVSS 118

» precise measurements - uses frictionless guides and a single point (platform) load cell

» robust construction – manufactured from durable aluminium for long service life in industrial environment

» easy to use - single button operation or remote operation via Microsoft® DLL interface or National Instruments ® LabVIEW library

» professional software - PinchPilot offers complete functionality

» different spring stiffnesses available – 2, 5, 10, 20, 65 N/mm

» Complete delivery – all components packed in high-quality transportation case

BIA600-SY-10-700

For railway doors and sliding steps

Drive Test's BIA 600 is an electronic pinch force measuring system for power driven train and tramway doors. Combining rugged construction with precision, the advanced mechanical design delivers exact measurements, even after years of usage in an industrial environment. Fast and easy performance of repetitive measurements is an important aspect of standard test scenarios. Drive Test has responded to this requirement by developing software which streamlines the measurement process and drastically reduces documentation effort. Measurements made on a complete vehicle can be entered, printed as a table, and stored in a database with a minimum of user entries.

PCE-VDL 16I

For the parameters temperature, relative humidity, air pressure, light and vibration

The mechanical engineering data logger PCE-VDL 16I from PCE Instruments measures and records the relevant parameters temperature, relative humidity, air pressure, light as well as 3-axis acceleration by means of a vibration sensor. This makes the data logger the ideal tool for monitoring machine vibration and at the same time measuring and recording important environmental conditions of the equipment.

Depending on the sampling rate, the data logger can record for several days. The recorded readings are saved to the internal 32 GB SD card and can be transferred to other media for evaluation where required.

ISO cal option

» 3-axis acceleration up to 800 Hz

» measures temperature, humidity, air pressure and light

» 32 GB SD memory card

» compact design: 86.8 x 44.1 x 22.2 mm

» country of origin Germany

APPLICATION

TECHNICAL SPECIFICATIONS

Parameter

Temperature measuring range	-20 ... +65 ℃
Accuracy	±0.2 ℃
Sampling rate	1 s ... 1800 s
Relative humidity measuring range	0 ... 100 % RH
Accuracy	±1.8 % RH
Sampling rate	1 s ... 1800 s
Air pressure measuring range	10 ... 2000 mbar
Accuracy	±2 mbar
	(within range 750 ... 1100 mbar) otherwise ±4 m bar
Sampling rate	1 s ... 1800 s
Light measuring range	0.045 ... 188,000 lux
Sampling rate	1 s 1800 s
3-axis acceleration measuring range ±16 g	
Accuracy	±0.24 g
Sampling rate	800 Hz 1 Hz

General technical data of the mini data logger PCE-VDL 16I

Memory capacity	2.5 readings per measurement, 3.2 billion readings with included 32 GB memory card
Keys	start / stop of a measurement; data logger on / off
LED	Log: operating status
	Alarm: alarm indicator
	Charge: charging status
	USB: status of PC connection
Power supply	integrated rechargeable Li-Ion battery 3.7 V / 500 mAh
	The meter is charged via the USB interface.
Integrated sensors	3-axis acceleration
Interface	USB
PC software	free setup and evaluation software (Windows XP / Vista / 7 / 8 / 10 32 bit / 64 bit) to record and evaluate data
Operating conditions	temperature -20 ... +65 ℃
Storage conditions	temperature +5 ... +45 ℃ (ideal storage conditions for battery)
	10 ... 95 % RH, non-condensing
Standards	complies with EU regulation RoHS/WEEE
Weight	approx. 60 g
Dimensions (L x W x H)	87 x 44 x 23 mm

Optional accessories:

Mounting plate	Order code PCE-VDL MNT

PCE-DPM 3

Dew point meter for compressed air pipes

The dew point meter is a mobile testing device for monitoring the quality of compressed air on stationary and mobile compressed air generators. This dew point meter measures the temperature, the relative humidity, H_2O and calculates the current dew point up to an ambient pressure of 20 bar. Thanks to the sintered cap, the moisture meter in the pressure lines is protected from dirt, moisture and high flow speeds. This increases the service life of the dew point meter's sensors. The data memory of the moisture meter enables the course of the measurement parameters to be recorded in a pressure line. The data recorded by the moisture meter is permanently stored in the internal memory.

ISO cal option

» data storage with CSV data export

» dew point, H_2O, temperature, humidity measurement

» for inline measurement of pressure pipes

» battery operation for mobile use

» with G1 / 2 "connection thread

» sensors protected with sintered filters

APPLICATION

TECHNICAL SPECIFICATIONS

Measurement	Temperature
Measuring range	-10 ... 60 °C / 14 ... 140 °F
Resolution	0.01 °C / 0.018 °F
Accuracy at 20°C / 68°F	-10 ... 50 °C / 14 ... 122 °F: ± 0.3 °C / 0.5 °F
Measurement	**Relative humidity**
Measuring range	0 ... 100 %
Resolution	0.01 %
Accuracy at 20°C / 68°F	<5 %: ±(0.025 % + 17.5 % of mv)
	>5 %: ±(1 % + 5 % of mv)
	>15 %: ±(2 % + 3 % of mv)
Measurement	**Dew point***
Measuring range	-50 ... 30 °C / -58 ... 86 °F
Resolution	0.01 °C / 0.018 °F
Accuracy	-40 ... 20 °C / -40 ... 68 °F: ±2 °C / 3.6 °F
	-50 ... -40 °C / -58 ... -40 °F: ±2.5 °C / 4.5 °F

*The accuracy of the dew point relates to an ambient temperature of 16 ... 25 °C / 61 ... 77 °F

Measurement	H_2O
Measuring range	40 ... 20,000 ppm
Resolution	1 ppm
Accuracy at 20°C / 68°F	±(7.3 ppm + 8.3 %)
Environmental conditions	-10 ... 60 °C / 14 ... 140 °F
	0 ... 20 bar (absolute)
Response time at: 0.2 m / s, 1 bar,	0 ... 40 °C / 32 ... 104 °F: 20 s [120 s]
20°C / 68°F, 63% RH [90%]	-40 ... 0 °C / -40 ... 32 °F: 10 s [20 s]
Data storage	For approx. 50,000 measuring points
Adjustable storage rates	10 seconds
	1, 5, 10, 20, minutes
Adjustable recording time	1, 5, 12, 24, 48 hours
File format	CSV
Cable length	approx. 1.5 m / 4.9 ft
Thread	G1 / 2"
Thread length	1.2 cm
Probe length	5.2 cm
Probe width	1.2 cm
Display	2.3" LCD
Power supply	Battery 3.7 V DC, 3000-mAh
Power supply power pack	Primary: 100 ... 240 V AC, 0.25 A
	Secondary: 5 V DC, 1 A
Interface 7 mains connection	Micro USB
Weight	Approx. 610 g / 1.3 lbs

PCE-DPM 10

Mobile dew point meter for compressed air pipes (-100 ... +50 ºC Td)

The dew point meter PCE-DPM 10 is a hand-held instrument for measuring dew point, pressure and humidity in compressed air systems. The unique sensor system, which combines a QCM and a Polymer sensor in a single unit, enables the user to measure the dew point in a range from -100 ºC Td up to +20 ºC Td. The integrated pressure sensor allows the measured value into any humidity value needed, for example ppm (v) or atmospheric dew point.

The PCE-DPM 10 dew point meter offers a unique algorithm for predicting final dew point values.

ISO cal option

» measures dew point, temperature and pressure

» -100 ... +20 ºC Td with pressure sensor

» measurement according to ISO 8573-1

» PDF report function

» integrated pressure sensor

» touch screen for easy operation

APPLICATION

TECHNICAL SPECIFICATIONS

Dew point

Measuring range	-100 ... +20 ºC Td
Accuracy	±1 ºC Td (0 ... 20 ºC Td)
	±2 ºC Td (-70 ... 0 / +20 ... +50 ºC Td)
