

Condition Monitoring Vibration Meter PCE-VT 1100

Condition Monitoring Vibration Meter PCE-VT 1100

Vibration tester for vibration measurement / Measurement memory for previous measurement/ Measurement of acceleration, vibration velocity and displacement in metric units /

Large frequency range / Battery-operated hand-held measuring device / Automatic shutdown

The condition monitoring vibration meter is used as a hand-held measuring device for the individual assessment of vibrations on machines and systems. With the help of this condition monitoring vibration meter, the actual state can easily be determined on site. Thus, corresponding changes can be made directly on site after the measurement. Thereafter, the new condition can be assessed. Thus, the condition monitoring vibration meter serves as a measuring device for a relative measurement on different machines.

The condition monitoring vibration meter serves essentially as precautionary or preventive maintenance of production machines. Very often, the condition monitoring vibration meter is used to assess the state of smaller electric motors.

- ▶ Measures speed, distance, acceleration
- ▶ Keeps the value after every measurement
- ▶ Easy to handle, powered by batteries
- ▶ Wide frequency range
- ▶ Automatic shut-down after 20 seconds of inactivity to protect battery life
- ▶ Low battery indicator
