After execute the datalogger function, the buzzer sound will off automatically to prevent any interference of the measurement.

7-5 Decimal point of SD card setting

The numerical data structure of SD card is default used the " ." as the decimal, for example "20.6" "1000.53" . But in certain countries (Europe ...) is used the " ," as the decimal point, for example " 20,6 " "1000,53". Under such situation, it should change the Decimal character at first.

When the lower display show " DEC "

- 1) Use the " ▲ Button " (3-3, Fig. 1) or " ▼ Button " (3-6, Fig. 1) to select the upper text to " USA " or " EURO ".

USA - Use " ." as the Decimal point with default.

EURO - Use " ," as the Decimal point with default.

- 2) After select the upper text to " USA " or " EURO ", press the " ENTER Button " (3-7, Fig. 1) will save the setting function with default.

7-6 SD memory card Format

When the lower display show " SD-F "

- 1) Use the " ▲ Button " (3-3, Fig. 1) or " ▼ Button " (3-6, Fig. 1) to select the upper text to "YES " or " NO ".

YES - Intend to format the SD memory card

NO - Not execute the SD memory card format

- 2) If select the upper to " YES ", press the " ENTER Button " (3-7, Fig. 1) once again, the Display will show text " YES ENTER " to confirm again, if make sure to do the SD memory card format, then press " Enter Button " once will format the SD memory clear all the existing data that already saving into the SD card.

7-7 Frequency weighting to A or C setting

When the display show " A "

- 1) Pressing and hold the " TIME Button " (3-5, Fig. 1) , into Advanced setting , to set A or C weighting, push ▲ or ▼ select the "A " or " C ".And then push " ENTER Button " set completely. Pushing the " POWER Button " to relieve the Advanced setting.

A - A Frequency weighting selection.

C - C Frequency weighting selection.

Note :

- a. *The characteristic table of A, C weighting, please ref. page 24.*
- b. *The characteristic of A weighting is simulated as the " Human Ear Listening " response.
Typically always select the A weighting when makes environmental sound level measurement.*
- c. *The C weighting characteristic is near the " FLAT " response. Typically it is suitable for checking the noise of machinery (Q.C. check) & knowing the real sound level of the tested equipment.*

8. POWER SUPPLY from DC ADAPTER

The meter also can supply the power supply from the DC 9V Power Adapter (optional). Insert the plug of Power Adapter into " DC 9V Power Adapter Input Socket " (3-10, Fig. 1). The meter will permanent power ON when use the DC ADAPTER power supply (The power Button function is disable).

9. SYSTEM RESET

If the meter happen the troubles such as :

CPU system is hold (for example, the key button can not be operated...).

Then make the system RESET will fix the problem.
The system RESET procedures will be either following method :

During the power on, use a pin to press the " Reset Button " (3-13, Fig. 1) once a while will reset the circuit system.

10. BATTERY REPLACEMENT

- 1) When the left corner of LCD display show "  ", it is necessary to replace the battery. However, in-spec. measurement may still be made for several hours after low battery indicator appears before the instrument become inaccurate.
- 2) Loose the " Battery Cover Screws " (3-18, Fig. 1) and take away the " Battery Cover " (3-18, Fig. 1) from the instrument and remove the battery.
- 3) Replace with DC 1.5 V battery (UM4, AAA, Alkaline/heavy duty) x 6 PCs, and reinstate the cover.
- 4) Make sure the battery cover is secured after changing the battery.

11. RS232 PC SERIAL INTERFACE

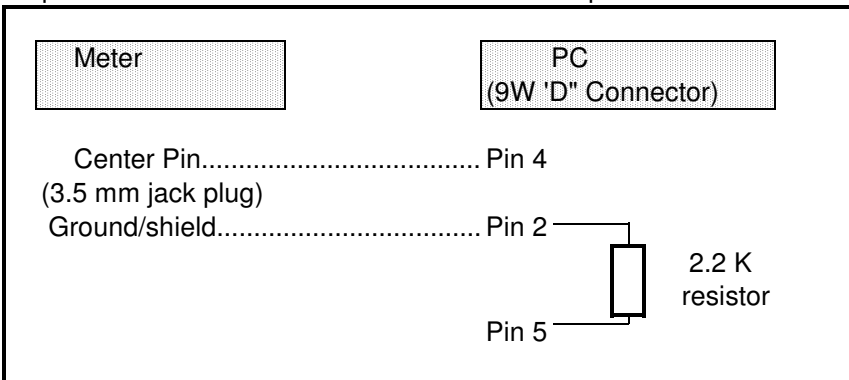

The instrument has RS232 PC serial interface via a 3.5 mm terminal (3-14, Fig. 1).

The data output is a 16 digit stream which can be utilized for user's specific application.

Remark:

*** When power use AC to DC adapter, the RS-232 signal will output**

A RS232 lead with the following connection will be required to link the instrument with the PC serial port.

The 16 digits data stream will be displayed in the following format :

D15 D14 D13 D12 D11 D10 D9 D8 D7 D6 D5 D4 D3 D2 D1 D0

Each digit indicates the following status :

D15	Start Word
D14	4
D13	When send the SPL display data = 1 When send the DOSE display data = 2
D12, D11	Annunciator for Display dB = 17 % = 03
D10	Polarity 0 = Positive 1 = Negative
D9	Decimal Point(DP), position from right to the left 0 = No DP, 1= 1 DP, 2 = 2 DP, 3 = 3 DP
D8 to D1	Display reading, D1 = LSD, D8 = MSD For example : If the display reading is 1234, then D8 to D1 is : 00001234
D0	End Word

RS232 FORMAT : 9600, N, 8, 1

Baud rate	9600
Parity	No parity
Data bit no.	8 Data bits
Stop bit	1 Stop bit

12. CALIBRATION

- 1) Prepare the optional " SOUND CALIBRATOR ", such as " SC-941 " or " SC-942 " (set range to 94.0 dB). Power on the Sound Calibrator & plug calibrator output socket into the " Microphone " head (3-8, Fig. 1) of the Sound Level meter.
- 2) Select " Time Weighting " at " Fast " position.
- 3) Select " A " weighting.
- 4) Adjust the " Calibration VR " (3-12, Fig. 1) carefully with a " - " screw driver until the display reading value within " 94 +/- 0.2 " dB.
